

# Unit 2: Introduction to CSS

PART THREE

# Background Properties

property: value;

background-color      name   hex   rgb()

background-image      url("Images/bg.png")

background-repeat      no-repeat   repeat-y   repeat-x   repeat

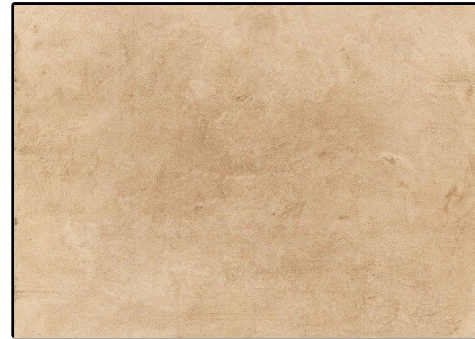

background-attachment      scroll   fixed

background-position      left   center   right      top   center   bottom

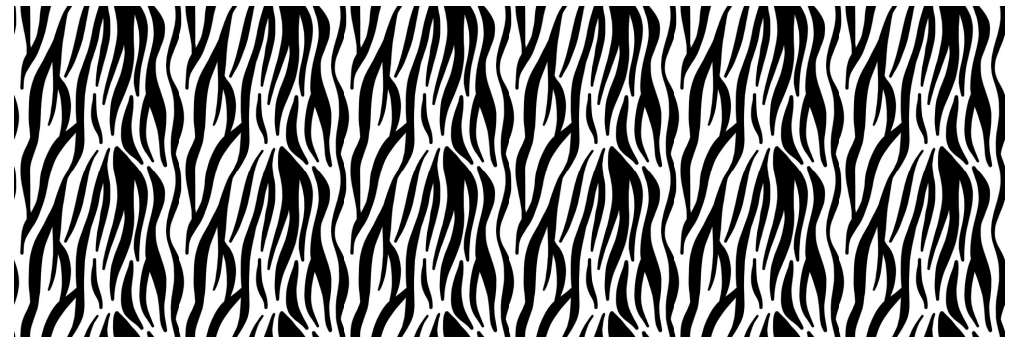

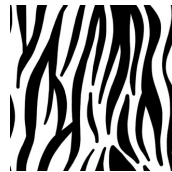

# Using Background Images

Always specify a color when  
you are using an image

```
body {  
background-image: url("bg.png");  
background-color: #F2D2B6; }
```

If using a repeating  
background (tiling), make  
sure that it tiles seamlessly

# Using Background Images

Consider using images under a div with a solid background

Can you read this?

This is text that you can now read as opposed to the text above which you can't.

Background images can be for individual elements, not just for the whole body of the web page

This is a Heading with a background image.

This is a list with a background image:

- One
- Two
- Three

# Other Helpful Properties

property: value;

height	500px	50%	
width	1000px	100%	
display	inline	block	
float	left	right	
clear	left	right	both
